

ABSTRACT

A reel device for a gaming machine comprising a chassis configured to support the reel device and a reel structure attached to the chassis. The reel structure has a hub, a frame, and a spoke attached to the hub and the frame. The frame preferably defines the periphery of the reel structure. The periphery of the reel structure preferably has media adapted to display a symbol to a game player. The reel may further have a board attached to the chassis and a plurality of light-emitting diodes positioned on the board, wherein the plurality of light-emitting diodes is adapted to transmit light to at least a portion of the media.
